

# THE ULTIMATE IN PRESTIGE TUBING

## The Tange Frame Component System

The frame design determines the performance of the bicycle. And the tubing determines the performance of the frame. Sixty years of accumulated expertise in the development of bicycle tubing stands behind each Tange frame tube system. Tange now offers many new and advanced frame tube systems that are setting new standards for the cycling world. When you ride Tange, you're riding a frame with a pedigree.

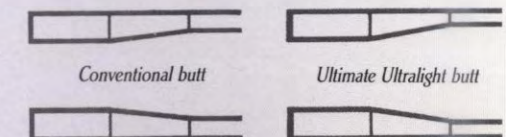

### Ultimate Tubing

Ultimate is a new line of Tange bicycle tubing born from Prestige technology. The use of special heat treatments and unique tubing configurations increase strength and minimize weight to provide a new level of tubing performance. It's the new "ultimate" in Tange tubing.

### Ultimate Ultralight Tubing

Unlike conventional butted tubes, Ultimate Ultralight features a greater difference in wall thickness between the butted and non-butted portions of the tube. The result is significantly reduced frame weight without any reduction in joint strength.

### Ultimate Ultrastrong Tubing

Ultimate Ultrastrong features external ribs and internal butting at the tube ends. This results in even greater frame strength without adding unnecessary weight.

\* Available as top and down tubes for MTB, hybrid, cross, and road frames. (28.6/31.8/34.9mm diameters).
